Apache cordova visual studio 2015 tutorial pdf files pdf download

12. Let's create two buttons in index.html UPLOAD DOWNLOAD Step 3 - Add Event Listeners Event listeners will be created in index.js inside the onDeviceReady function. We are finished and have our first windows Kapsel application running... This plugin is used for uploading and downloading files. You can also see on your SMP (or HCPms) server that the logon plugin created a new connection for our user: 13. For that you can clone my github kapsel repository () or download the content as zip file. We set an event listener here and specify that the method "init" should be called if Cordova throws this event. You will probably want to use your own server. Besides Windows as target platform (e.g. Win Phone, Win 8.1 or Win10), Android and iOS are also supported. Anyway, in the following I will primarily focus on hybrid apps for Windows 8.1 or Windows 10. I have to say that I was positively surprised about the way Microsoft integrated Cordova handling into the IDE. On tab "Installed" you can see the currently installed custom plugins 5. If there is a problem the compiler will directly throw an exception (e.g. Illegal character, or Parsing error, ...) If you skip this step you will run later (on compile time) into the error Registry returned 404 for GET on 2. We uploaded file to postimage.org to make things more simple. If no passcode policy is defined user can click here on "Disable app-passcode" and then again on the button in the right top corner "Continue". When executing this first time ever (initial app run) a Logon UI is shown to the user. 6. On subsequent app starts the successcallback is called directly without showing a UI to the user. In the init method we will call sap.Logon.startLogonInit(context, appDelegate); This will then start the LogonPlugin initialization process. Android and iOS apps can be executed on a web-based emulator (Ripple). function downloadFile() { var fileTransfer = new FileTransfer(); var uri = encodeURI(""); var fileURL = "///storage/emulated/0/DCIM/myFile"; fileTransfer.download(uri, fileURL, function(entry) { console.log("download complete: " + entry.toURL()); }, function(error) { console.log("download error source " + error.source); console.log("download error target " + error.target); console.log("download error code" + error.code); }, false, { headers: { "Authorization": "Basic dGVzdHVzZXJlOnRlc3RwYXNzd29yZA==" } }); } Once we press the DOWNLOAD button, the file will be downloaded from the postimg.org server to our mobile device. After that I tested the feature a bit in combination with SAP's preferred solution for hybrid applications (cordova + Kapsel). In my case the application is called "com.sap.mit.sample" and the endpoint is a simple OData sample service () SSO Mechanism is not really needed, because the OData service is not authentication protected. document.getElementById("uploadFile").addEventListener("click", uploadFile); document.getElementById("downloadFile").addEventListener("click", downloadFile); Step 4A - Download Function This function will be used for downloading the files from server to device. Preparation I was using following versions Visual Studio 2015 (Version 14.0) There is a Community Edition available which is sufficient for hybrid app development, but please consider the license agreement When installing Visual Studio make sure that you also checked the "HTML/JavaScript (Apache Cordova)" Option under option "Cross Platform Mobile Development". For Authentication I created a new security profile with a "System Login" authentication provider. For that you can add a file named "config.json" in folder ".cordova" in the root of your project and add the following as content: { "plugin_search_path": "C:\\Development\\KapselSDKSP10PL06\\plugins" } Of course the path here needs to be adapted to fit your environment, e.g. C:\\SAP\\MobileSDK3\\KapselSDK\\plugins Be careful here, that there are no additional characters are added or a wrong encoding has been used, for best results create the config.json file with notepad and then copy the whole file into the ".cordova" folder. Choose "Debug" with "Windows-x64" as Solution Platform, then run on the "Simulator". After that the simulator will start and will execute a "Hello-World" application. This is only for testing purpose, because this tutorial does not cover security related topics. Step 1 - Installing File Transfer Plugin We need to open command prompt and run the following command to install the plugin. The uri value will be linked for posting to posttestserver. After successful onboarding a sample sapui5 based app is shown where we can perform some test operations, like sending a request. If successful the following screen will be shown where the user can choose an app specific passcode. 11. function uploadFile() { var fileURL = "///storage/emulated/0/DCIM/myFile" var uri = encodeURI(""); var options = new FileUploadOptions(); options.fileKey = "file"; options.fileName = fileURL.substr(fileURL.lastIndexOf('/')+1); options.mimeType = "text/plain"; var headers = { 'headerParam': 'headerValue' }; options.headers = headers; var ft = new FileTransfer(); ft.upload(fileURL, uri, onSuccess, onError, options); function onSuccess(r) { console.log("Code = " + r.responseCode); console.log("Response = " + r.response); console.log("Sent = " + r.bytesSent); } function onError(error) { alert("An error has occurred: Code = " + error.code); console.log("upload error source " + error.source); console.log("upload error target " + error.target); } } Now we can press the UPLOAD button to trigger this function. Do not use System Login modules in productive scenarios. On first time execution the platform "windows" will be added to the project (You can see this inside the Console Output. When running the app now specify your user and password into the logon screen. Introduction As you might heard Visual Studio is now also able to create and handle Cordova based applications. Adding Kapsel plugins We now want to add some of SAP's plugins, e.g. Logon and Logger plugin. Copy the content of folder "KapselSampleRefSmall" into your www folder in Visual Studio. These passcode settings can be controlled by the app settings on SMP server. C:\\Users\\username\\Desktop\\CordovaProject>cordova plugin add cordova-plugin-file-transfer Step 2 - Create Buttons In this chapter, we will show you how to upload and download files. The copied content is showing now how to start the Logon plugin. We will get a console output as confirmation that the uploading was successful. 4. Additionally, Android apps can be also executed on an x86 based emulator. We have a Cordova based application running. Highlight "Blank App (Apache Cordova)", provide name and solution, then click on "OK". We will use the SAPUI5 resources and also the jquery version which got bundled together with the logon plugin. As a prerequisite we have to tell Visual Studio where to find the Kapsel plugins, so that they can be integrated (during compile time). In this sample app I show the logon plugin's return values in a text area. The logon (or registration) process is successfully finished. uri is the server download link and fileURI is the path to the DCIM folder on our device. Make also sure that you have installed all required components that are needed by Codova, e.g. nodejs, Java, GIT... If not you can also do this by using the Visual Studio installer... Kapsel SDK (SMP SDK SP10PL06) Sample Kapsel SAPUI5 app from my GitHub repository (detailed steps are described below) SMP Server SP09 Create an application on SMP (or HCPms) server which you can use later for connecting to. Now we need to add some coding to use these Kapsel plugins. Now choose tab "Custom", select option "local" and then navigate to the plugin you want to add, e.g. C:\\SAP\\MobileSDK3\\KapselSDK\\plugins\\logon . You can do the same for other plugins, e.g. the Logger plugin. Where I hardcoded a user named "Marvin" with password "test". For that double click on config.xml which will load the cordova specific settings window and open menu entry "Plugins" 3. In file SMPHelper.js the app is getting initialized and also configured. The app will start. In my case I entered user "Marvin" and password "test" 10. The console output will look like this - Step 4B - Upload Function Now let's create a function that will take the file and upload it to the server. Again, we want to simplify this as much as possible, so we will use posttestserver.com online server for testing. 7. After the project got created, you can choose on which device type you want to execute this hybrid app (e.g. Android, iOS or Windows). We can add the kapsel plugins directly in Visual Studio. We can also check the server to make sure that the file was uploaded. We can check the specified folder and see that myFile is there. You can overwrite the existing index.html. We are adding click events and callback functions. So make sure that you are adapting the values here according to your environment: 8. The function is placed in index.js and will be triggered when the corresponding button is pressed. Creating Cordova App in Visual Studio Open Visual Studio 2015 Choose File > New > Project... and choose template "Apache Cordova Apps" which is under option "JavaScript". Cordova will throw an event called "deviceready". 9. After clicking on "Registration" in the right top corner the logon plugin tries to perform a registration against the given SMP (or HCPms). In the next step we should add Kapsel plugins, like the Logon and Logger plugin. I watched some live demos and presentations on SAP TechEd 2015 in Barcelona. In this way we do not need to add these resources separately. After that click on "Add". Currently there is a cooperation between SAP's mobile development teams and Microsoft going on, you can also read more about that, e.g. here: SAP Fiori Mobile Apps and Tools for Apache Cordova - The Visual Studio Blog - Site Home - MSDN Blogs In the following I want to describe shortly how you can develop a Cordova based app which includes Kapsel plugins inside Visual Studio.

08/09/2015 - See the Wijmo blog for a great tutorial Introducing Advanced Stock Trending Visualizations in FinancialChart, ... Xuni and Wijmo. See the ComponentOne Web site for licensing options, pricing and to download a free, 30-day demo (shown in Figure 1). [Click on image for larger view ... Apache Cordova, Visual Studio and Syncfusion UI ... 18/06/2013 - Visual Studio Code Snippets are very useful and a great productivity enhancing tool for templating reusable code blocks into the editor. I have tons of snippets I use all the time for great productivity savings, so I created a small hacky utility to move code snippets from Visual Studio to VS Code and with more limited features to Rider. This page contains various versions of Apache Pig. Click the latest version among them. Step 5. Within these folders, you will have the source and binary files of Apache Pig in various distributions. Download the tar files of the source and binary files of Apache Pig 0.15. pig0.15.0-src.tar.gz and pig-0.15.0.tar.gz. Install Apache Pig 01/12/2005 - Microsoft 365 brings together Office 365, Windows 10, and Enterprise Mobility + Security. It delivers a complete, intelligent, and secure solution to empower people. 知识兔(zhishitu.com)是一家集教育培训、在线教育、考试服务的平台。 17/03/2022 - Schema.org is a set of extensible schemas that enables webmasters to embed structured data on their web pages for use by search engines and other applications. 14/01/2017 - Always run Visual Studio as Administrator with no UAC prompt. Please Sign up or sign in to vote. 30 Jul 2015. Tom Chantler. UPDATE: 2015-07-30 - Works correctly in Windows 10 RTM (10.0. ... A tutorial on writing a shell extension that can be used on the Send To menu. VC7.1. C++. VC6. WinXP. Windows.
